

## PET CARE PLANS FOR CATS

All cats need regular veterinary care to ensure optimal health and quality of life no matter their stage of life.

### Illness is more common than you think

Kittens are highly susceptible to diseases because their immune systems aren't yet fully developed. It's important to vaccinate and deworm your kitten on a regular schedule in order to provide the maximum protection.

### Cats age a lot faster than we do

Aging means more than just gray muzzles and longer naps—illness and disease could be lurking undetected in your senior cat. Physical exams and diagnostic tests are crucial for finding problems not visible to the naked eye.

### Cats are really good at hiding illness

It's a common misconception that cats don't get sick. In fact, cats are susceptible to many forms of

disease— regardless of whether they live indoors or outdoors. Regular veterinary care can help stop illnesses before they happen.
